

## 1-1 Ink Volume Setter work flow from prepress to press

\*1 The floppy disk and USB memory can be used as an external storage media according to the press.  
Please refer to the manual of each press which media can be used.

### 1) Creating the document

Create a document with Macintosh or Windows DTP software.

### 2) Platesetter / imagesetter output

Output the PostScript file or PDF file to the platesetter / imagesetter via the PS-RIP.

### 3) Image area ratio data calculation (In case of imagesetter)

Calculate the data for the image area ratio with the Ink Volume Setter.

### 4) Making the plates

Make the plates using output media from the imagesetter.

### 5) Printing

Set the plates on the press and read the image area ratio data from the RYOBI printing control system operation stand. Then start printing.
